

## Lab15-Assignment

Name : M Bhagyalaxmi

Student id:AF0339449

1) Write a Java program that demonstrates the following operations on a HashSet: • Create a HashSet of integers. • Add the numbers 5, 10, 15, 20, and 25 to the set. • Display the elements of the set. • Check if the set contains the number 10. • Remove the number 15 from the set. • Display the size of the set.

```
package com.wrapperclass.examples;
import java.util.HashSet;
import java.util.Scanner;
public class Hashset {
    public static void main(String[] args) {

        HashSet<Integer> hs = new HashSet<Integer>();
        hs.add(5);
        hs.add(10);
        hs.add(15);
        hs.add(20);
        hs.add(25);

        //display
        System.out.println(hs);

        //contains() usage
        System.out.println("Collection contains Element
10 :"+ hs.contains(10));

        //remove an element
        hs.remove(15);

        //display size of collection
        System.out.println("Size of collection "+
hs.size());

    }
```

```
}
```

## Output:

```
1 package com.wrapperclass.examples;
2 import java.util.HashSet;
3 import java.util.Scanner;
4 public class Hashset {
5     public static void main(String[] args) {
6
7         HashSet<Integer> hs = new HashSet<Integer>();
8         hs.add(5);
9         hs.add(10);
10        hs.add(15);
11        hs.add(20);
12        hs.add(25);
13
14        //display
15        System.out.println(hs);
16
17        //contains() usage
18        System.out.println("Collection contains Element 10 :"+ hs.contains(10));
19    }
}
```

Problems Javadoc Declaration Console Coverage  
terminated> Hashset [Java Application] C:\Users\USER\p2\pool\plugins\org.eclipse.justj.openjdk.hotspot.jre.full.win32.x86\_64\_19.0.2.v20230129-1123\jre\bin\javaw.exe (Nov 16, 2023, 12:00:00 PM)  
[20, 5, 25, 10, 15]  
Collection contains Element 10 :true  
Size of collection 4

**2)** Write a Java program to simulate the "Hot Potato" game using a queue. In this game, players stand in a circle and pass a potato (or any other object) while music plays. When the music stops, the player holding the potato is out. • Create a queue to represent the circle of players. • Enqueue player names. • Dequeue players one by one and enqueue them again to simulate passing the potato. • Repeat the dequeue and enqueue process, simulating the music stopping and players being eliminated until only one player remains.

```
package com.wrapperclass.examples;
import java.util.LinkedList;
import java.util.Queue;
public class HotPotatoGame {
    public static void main(String[] args) {
        // Create a queue to represent the circle
of players
        Queue<String> playersQueue = new
LinkedList<>();

        // Enqueue player names
```

```

        playersQueue.add("Bhagya");
        playersQueue.add("vasantha");
        playersQueue.add("krishna");
        playersQueue.add("venu");
        playersQueue.add("vijay");

        // Set the number of rounds to simulate the
game
        int rounds = 3;

        simulateHotPotatoGame(playersQueue,
rounds);
    }

    private static void
simulateHotPotatoGame(Queue<String> playersQueue, int
rounds) {
        System.out.println("Starting Hot Potato
Game!");

        while (playersQueue.size() > 1) {
            System.out.println("Current players in
the circle: " + playersQueue);

            // Simulate passing the potato by
dequeueing and enqueueing
            for (int i = 0; i < rounds; i++) {
                String currentPlayer =
playersQueue.poll();
                System.out.println("Passing the
potato from " + currentPlayer + " to the next
player.");
                playersQueue.offer(currentPlayer);
            }

            // The player holding the potato is
eliminated
            String eliminatedPlayer =
playersQueue.poll();

```

```

        System.out.println(eliminatedPlayer + "
is out!");

        System.out.println();
    }

    // The last remaining player wins the game
    System.out.println("The winner is: " +
playersQueue.poll());
    }

}

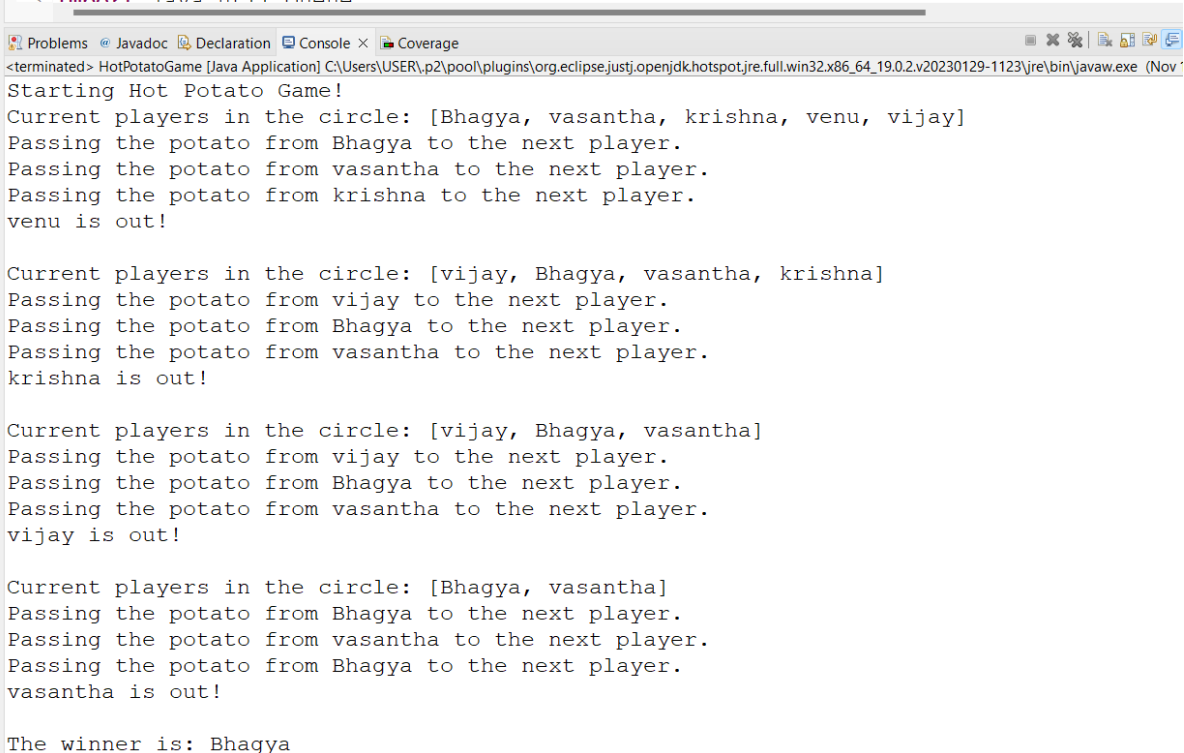

```

## Output:

```

1 package com.wrapperclass.examples;
2 import java.util.LinkedList;
3 import java.util.Queue;

```

```

<terminated> HotPotatoGame [Java Application] C:\Users\USER\p2\pool\plugins\org.eclipse.justi.openjdkhotspot.jre.full.win32.x86_64_19.0.2.v20230129-1123\jre\bin\javaw.exe (Nov
Starting Hot Potato Game!
Current players in the circle: [Bhagya, vasantha, krishna, venu, vijay]
Passing the potato from Bhagya to the next player.
Passing the potato from vasantha to the next player.
Passing the potato from krishna to the next player.
venu is out!

Current players in the circle: [vijay, Bhagya, vasantha, krishna]
Passing the potato from vijay to the next player.
Passing the potato from Bhagya to the next player.
Passing the potato from vasantha to the next player.
krishna is out!

Current players in the circle: [vijay, Bhagya, vasantha]
Passing the potato from vijay to the next player.
Passing the potato from Bhagya to the next player.
Passing the potato from vasantha to the next player.
vijay is out!

Current players in the circle: [Bhagya, vasantha]
Passing the potato from Bhagya to the next player.
Passing the potato from vasantha to the next player.
Passing the potato from Bhagya to the next player.
vasantha is out!

The winner is: Bhagya
